

Starch biocomposites are an eco-answer

Consumers and retailers are seeking more sustainable products. But, while 78% of consumers say that they buy 'green' products, only 43% are willing to pay more.

Our Terratek SC starch biocomposites provide effective solutions to meet the growing demand for eco-friendly products. They provide a more sustainable alternative to traditional plastics without compromising on cost or quality.

Terratek SC has been certified by the USDA BioPreferred® program. Products made with Terratek SC may qualify for preferred purchasing by Federal procurement agencies. They can be injection molded or extruded using standard processing machinery and are capable of withstanding temperatures beyond boiling.

At Green Dot, we help designers and manufacturers meet the growing demand for more sustainable products. The applications for our starch biocomposites are only limited by your imagination.

If you'll be attending NPE 2015 and you'd like to talk more about Terratek SC starch-composites, visit us at booth S19200.

Biocomposites vs. traditional plastics

Plastics are useful and ubiquitous. But just how much are traditional formulations costing us?
